“The difference with Orange and Bronze is in the people. They are well-qualified, competently trained staff. Their communication skills are exemplary, and they care.”

——— Mark Janveaux
Chief Information Officer

About

Orange & Bronze Software Labs has architected and developed huge mission-critical systems, many handling millions of daily transactions for multibillion-dollar companies all over the world. We have also built creative new products for ambitious startups, nimbly keeping up with their rapid changes in requirements.

We are fanatical about Agile Engineering, in order to deliver stable, potentially-shippable product increments at the end of every sprint, even with rapidly changing requirements.

WHAT IS AGILE ENGINEERING?

Scrum is not enough. Even if teams are actively exchanging feedback with stakeholders and trying to deliver in short sprints, the output of the sprints are often not potentially shippable. Bugs plague the output, and when one bug gets fixed, three more take its place.

Agile embraces short deliveries and accommodating change, but those are impossible without sound engineering practices. Agile teams deliver software at the end of each sprint that is solid - very few defects, even if each sprint accommodates massive changes.

We have espoused Agile Engineering from the very beginning of our existence. It is a point of pride of each of our teams to keep our codebase near-defect-free and deployable, not just at the end of each sprint, but at any given time.

Our clients may or may not care about Agile, but they care about the results of the software they receive from us - solid software on which they can trust their business.

SERVICES

SOFTWARE ENGINEERING DONE RIGHT.

Enterprise Java Software Development with the Spring Framework

- Product Engineering
- Staff Augmentation
- Turnkey Projects
- Build-Operate-Transfer of Offshore Development Team
- Legacy Migration & Modernization
- System Maintenance
- Project Rescue

Training & Coaching

- Agile Software Development
- Spring Framework
- JPA/Hibernate
- Agile Requirements
- Agile Engineering & Java Best Practices
- Design Patterns
- Enterprise Architects' Boot Camp

Advisory Services

- Performance Tuning
- Process & Architecture Review/Audit
- Agile & Spring Framework Coaching
- Technical Due Diligence
- Build-Operate-Transfer of Development Team
- Process Design for Vendor & Bid Management
- Design of Enterprise Architecture

Google for Work

- Migration of your current platform to Google Apps
- On-site support
- Training for your staff
- Customization
- Software development on the Google Apps Engine platform

“It’s clear on our team
that their specific work
ethic, problem solving
ability, and commitment
to lifelong learning and
improvement play a big
role as their good
nature and
friendliness.”

Tom Okogami
Vice President

“Orange and Bronze helped us port our legacy Java application to the EJB platform. They have an excellent technical team which enabled us to deliver a very complex application with minimal code change and zero impact to the application functionality.

They are very professional and have the commitment to deliver. I’m happy with their work. I’m looking forward to work with them in our future projects.”

Roy Donasco
Solution Architect

CLIENTS

“It’s almost been 3 years we have been working together as strategic partners. What I mean by strategic partnership is that not only do we get the much-needed help around the delivery of the projects, we also get hands-on training.”

CLIENTS

“For a long time, Pointwest Technologies has been looking for a training provider who has a comprehensive Java training program. Orange and Bronze fills that void. O&B people have the passion, competence, energy, and pizzazz proven by their training methodology, mentoring skills, and team of Java professionals.”
